Supabase, Postgres, SQLite, PowerSync, Sanity

AI
MCP servers, TanStack AI, Claude Code, Codex, Grok

Tooling
Git, Bun, Vite, Vitest, Vercel

LANGUAGES

German · native
English · fluent (C1)

PROFILE

Self-taught full-stack developer focused on React and TypeScript. I take products from the data model to the deployed app on my own: web, mobile and desktop, offline-capable. Freelancing since 2024; since December 2025 I have been building my own product, Self-Engine.

EXPERIENCE

Founder & sole developer
Dec 2025 – present

Self-Engine

- Offline-first productivity platform for the self-employed: time tracking, tasks, calendar, finances and habits, synced across web, macOS and iOS.
- One monorepo, three apps: TanStack Start (web), Expo / React Native (iOS) and Electron (macOS) on a shared domain layer.
- MCP server through which AI assistants work with the app's data. More than 50 recorded architecture decisions.

Freelance full-stack developer
2024–present

Self-employed

- **Tattoo Booking Portal:** websites for a tattoo studio and its artists, with a portal where the artists handle every booking request.
- One monorepo: each site with its own Sanity CMS and deployment, the portal on Supabase with a separate access area per artist.

PROJECTS

gwydion.dev 2026 · Bilingual portfolio with TanStack Start, Tailwind CSS and MDX.

Burgwacht 2026 · Castle-building strategy game in Godot 4, built solo.

Work Manager 2025 · Work and time management with Next.js and Supabase; predecessor of Self-Engine.
